

Please do not consider any options that would limit my ability to use my XM services to get information regarding local weather and traffic because of pressure by local broadcasters. Instead, look to options that free up the local broadcasters to offer better services. We do not benefit from protectionist policies, rather, allowing the free market to prevail. I pay for this service and should not be forced to listen to free broadcasts that are unreliable and untimely.

Imagine what your phone would look like today if we did not open that market - you would still have the plain old wall or desk phone and your bill would be horriffic!
